

# Calavera details:

Monday, 12 September 2016 3:34 PM

Currently I am running a Windows 10 Laptop and have added Vagrant/VirtualBox to review your project - but this doesn't appear to be liking the Windows side for some reason...?

The Vagrant file provides this error:

```
C:\Users\dcaddick\Desktop\Vagrant\Calavera>vagrant up
Launching from windows.
Bringing machine 'base' up with 'virtualbox' provider...
Bringing machine 'cerebro1' up with 'virtualbox' provider...
Bringing machine 'brazos1' up with 'virtualbox' provider...
Bringing machine 'espina1' up with 'virtualbox' provider...
Bringing machine 'hombros1' up with 'virtualbox' provider...
Bringing machine 'manos1' up with 'virtualbox' provider...
Bringing machine 'cara1' up with 'virtualbox' provider...
Bringing machine 'nervios1' up with 'virtualbox' provider...
Bringing machine 'pies' up with 'virtualbox' provider...
Bringing machine 'test' up with 'virtualbox' provider...
==> base: Box 'opscod-ubuntu-14.04a' could not be found. Attempting to find and install...
    base: Box Provider: virtualbox
    base: Box Version: >= 0
==> base: Box file was not detected as metadata. Adding it directly...
==> base: Adding box 'opscod-ubuntu-14.04a' (v0) for provider: virtualbox
    base: Downloading: opscod-ubuntu-14.04a
    base:
An error occurred while downloading the remote file. The error
message, if any, is reproduced below. Please fix this error and try
again.
```

Couldn't open file /C:/Users/dcaddick/Desktop/Vagrant/Calavera/opscod-ubuntu-14.04a

If I then try using the Vagrantfile.Template I get the following:

```
C:\Users\dcaddick\Desktop\Vagrant\Calavera>vagrant up
Launching from windows.
Bringing machine 'base' up with 'virtualbox' provider...
Bringing machine 'cerebro1' up with 'virtualbox' provider...
Bringing machine 'brazos1' up with 'virtualbox' provider...
Bringing machine 'espina1' up with 'virtualbox' provider...
Bringing machine 'hombros1' up with 'virtualbox' provider...
Bringing machine 'manos1' up with 'virtualbox' provider...
Bringing machine 'cara1' up with 'virtualbox' provider...
Bringing machine 'nervios1' up with 'virtualbox' provider...
Bringing machine 'pies' up with 'virtualbox' provider...
Bringing machine 'test' up with 'virtualbox' provider...
==> base: Box 'opscod-ubuntu-14.04a' could not be found. Attempting to find and install...
    base: Box Provider: virtualbox
    base: Box Version: >= 0
==> base: Box file was not detected as metadata. Adding it directly...
==> base: Adding box 'opscod-ubuntu-14.04a' (v0) for provider: virtualbox
    base: Downloading: opscod-ubuntu-14.04a
    base:
An error occurred while downloading the remote file. The error
message, if any, is reproduced below. Please fix this error and try
again.
```

Couldn't open file /C:/Users/dcaddick/Desktop/Vagrant/Calavera/opscod-ubuntu-14.04a

So then I tried looking at the Startup.bat file and using that without modification - even though it mentions being deprecated/obsolete:

The box does appear to be downloaded from AWS....

```
C:\Users\dcaddick\Desktop\Vagrant\Calavera>del shared\keys\*
The system cannot find the path specified.
C:\Users\dcaddick\Desktop\Vagrant\Calavera>vagrant box add http://opscod-vm-bento.s3.amazonaws.com/vagrant/virtualbox/opscod\_ubuntu-14.04\_chef-provisionerless.box --name opscod/temp --force
Launching from windows.
==> box: Box file was not detected as metadata. Adding it directly...
==> box: Adding box 'opscod/temp' (v0) for provider:
    box: Downloading: http://opscod-vm-bento.s3.amazonaws.com/vagrant/virtualbox/opscod\_ubuntu-14.04\_chef-provisionerless.box
    box: Progress: 100% (Rate: 917k/s, Estimated time remaining: --:--:--)
==> box: Successfully added box 'opscod/temp' (v0) for 'virtualbox!'
C:\Users\dcaddick\Desktop\Vagrant\Calavera>vagrant up base
Bringing machine 'base' up with 'virtualbox' provider...
There are errors in the configuration of this machine. Please fix
```

the following errors and try again:

vm:

\* The host path of the shared folder is missing: ./shared

Vagrant:

\* Unknown configuration section 'berkshelf'.

```
C:\Users\dcaddick\Desktop\Vagrant\Calavera>vagrant package base
```

```
==> base: VM not created. Moving on...
```

```
C:\Users\dcaddick\Desktop\Vagrant\Calavera>vagrant box add opscore-ubuntu-14.04a package.box -f
```

```
Launching from windows.
```

```
==> box: Box file was not detected as metadata. Adding it directly...
```

```
==> box: Adding box 'opscode-ubuntu-14.04a' (v0) for provider:
```

```
  box: Downloading: package.box
```

```
  box:
```

```
An error occurred while downloading the remote file. The error message, if any, is reproduced below. Please fix this error and try again.
```

```
Couldn't open file /C:/Users/dcaddick/Desktop/Vagrant/Calavera/package.box
```

```
C:\Users\dcaddick\Desktop\Vagrant\Calavera>del package.box
```

```
Could Not Find C:\Users\dcaddick\Desktop\Vagrant\Calavera\package.box
```

```
C:\Users\dcaddick\Desktop\Vagrant\Calavera>vagrant destroy base -f
```

```
==> base: VM not created. Moving on...
```
